

Having a PRO come out to install your NuBryte? Use this handy checklist to help you prepare for a successful installation!

Pre-Installation Checklist – For Homeowners

- Think about how you will use NuBryte, and which devices you'd like to see in which locations. Talk these over with your PRO.
- You must have a wireless WIFI network in your home.
- Verify that your home meets the requirements for a NuBryte product (neutral wire, copper or copper-clad wiring, sufficient spacing). If you are unsure, discuss this with your PRO.
- If your network is password protected, have the password on-hand.
- Someone 18 or older must be in the home during installation.
- Allow sufficient time for the installation to be completed
- If you want to control your NuBryte remotely, make sure your Smartphone meets the minimum operating systems requirements
- Download the NuBryte app onto your Smartphone
- Make sure your Smartphone can connect to your wireless network using Wi-Fi, so that it can be paired with the installed device(s).
- Check the bulbs on your light fixture to make sure they don't exceed maximum wattage for the NuBryte Touchpoint. Consider upgrading to high-efficiency LED bulbs to reduce wattage amounts.
 - Dimmable LED or CFL: up to 150W per light fixture
 - Incandescent or Halogen: up to 300W per light fixture
- Make sure there is a clear path to your breaker panel. Your PRO will need to access it as part of the installation.
- Prepare a list of questions you have about NuBryte, that you'd like to discuss with your PRO
- Learn more, and share your experiences in the NuBryte Participate area:
